

Application No. 09/913,703

**Amendments to the Abstract:**

Please replace the Abstract with the following amended Abstract:

~~It is applicable to a~~ A formwork made from a tubular body in plasticised wood, rigid plastic or the like ~~is disclosed.~~ The formwork can be conveniently stabilised by means of an outer envelope made of a glass fibre mesh rolled up helicoidally, with or without the intercalation of a second tubular body made of expanded polystyrene; ~~the One embodiment of the disclosed improvements of the invention consist comprises in obtaining an inner tubular body in plastic or wood made of a single plate (7) which width coincides with the perimeter of the formwork to be obtained, having said~~ the plate (7) has a continuous internal side (8) and with an external side (10) wherein a plurality of longitudinal cuts are established, evenly distributed, affecting mainly the thickness of said plate, defining weakened zones (11) allowing an easy deformation of said plate (7), which is initially flat, in order to convert it into a cylindrical and tubular element.
